Maintenance Requirements

Every 6 months the following maintenance should be undertaken by a competent person:

- Review the risk assessment for the system and update if necessary
- Check the structure of the gate
- Make sure the hinges are in good working order
- Lubricate the drive mechanism as per the operator instructions
- Check the function of the manual release
- Check the correct functioning of all safety devices
- Test the setting and function of the anti-crush system

For safety reasons, cut power to the system before manual releasing and before re-engaging.

- 413 & 415
- Slide the protective
- arrow on the release
